- A.** Defines payment terms and banking information for the vendor
- B.** Defines a number of payment parameters that are used during payment processing
- C.** Generates separate checks for each voucher at the location level
- D.** Specifies matching options if matching is used to approve vouchers for payment
- E.** Defines the primary physical address where business is conducted

Answer: A,C,D,E

NEW QUESTION: 3

You need to use Reporting Services Configuration Manager to configure SSRS to complete the installation on SSRS02.

What should you do? (Each correct answer presents a partial solution. Choose all that apply.)

- A.** Delete the encryption key.
- B.** Join the scale-out deployment.
- C.** Specify the execution account.
- D.** Set the Report Manager URL.
- E.** Change the encryption key.
- F.** Set the Report Server Web Service URL.

Answer: C,D

Explanation:

B: Reporting Services provides a special account that is used for unattended

report processing and for sending connection requests across the network. The account is used in the following ways:

/ Send connection requests over the network for reports that use database authentication, or connect to external report data sources that do not require or use authentication.

/ Retrieve external image files that are used in report. If you want to use an image file and the file cannot be accessed through Anonymous access, you can configure the unattended report processing account and grant the account permission to access the file.

E: Example:

1. First of all open Internet Explorer and go to Report Manager URL which is something like below:

<http://string-pc/Reports2012>

2. Click on your SSRS project. So now it will show you the list of reports which are

deployed on your report server.

<http://bhushan.extreme-advice.com/wp-content/uploads/2012/11/2-Report-Snapshots-in-SSRS.png>

3. Now click on down arrow on the report which you want to subscribe and select Manage. Etc.

* From Scenario:

/ A new server named SSRS02 has been joined to the domain, SSRS02 will host a single-server deployment of SSRS so that snapshots of critical reports are accessible during the upgrade.

/ You have the following requirements for SSRS02:

- Replicate the SSRS01 configuration.
- Ensure that all current reports are available on SSRS02.
- Minimize the performance impact on SSRS01.

/ In preparation for the upgrade, the SSRS-related components have been installed on the new SSRS02 server by using the Reporting Services file-only installation mode. The Reporting Services databases have been restored from SSRS01 and configured appropriately.

/ SSRS02 is the recovery server and is running the same version of SSRS as SSRS01. The report server configuration files, custom assemblies, and extensions on SSRS02 are manually synchronized with SSRS01.
