Answer: A

NEW QUESTION: 2

It is possible to restrict the time of day, or day of week that a change process can occur.

A. FALSE

B. TRUE

Answer: B

NEW QUESTION: 3

Ferris Plastics, Inc. is a medium sized company, with an enterprise network (access, distribution and core switches) that provides LAN connectivity from user PCs to corporate servers. The distribution switches are configured to use HSRP to provide a high availability solution.

DSW1 -primary device for VLAN 101 VLAN 102 and VLAN 105

DSW2 - primary device for VLAN 103 and VLAN 104

A failure of GigabitEthernet1/0/1 on primary device should cause the primary device to release its

status as the primary device, unless GigabitEthernet1/0/1 on backup device has also failed.

Troubleshooting has identified several issues. Currently all interfaces are up. Using the running configurations and show commands, you have been asked to investigate and respond to the following question.

During routine maintenance, it became necessary to shut down the GigabitEthernet1/0/1 interface on DSW1 and DSW2. All other interfaces were up. During this time, DSW1 became the active router for the VLAN 104HSRP group. As related to the VLAN 104HSRP group, what can to be done to make the group function properly?

A. On DSW1, disable preempt.

B. On DSW1, increase the decrement value in the track command to a value greater than 6.

C. On DSW1, decrease the decrement value in the track command to a value less than 1.

D. On DSW2 decrease the priority value to a value less than 150.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

We should NOT disable preempt on DS1. By do that, you will make Vlan104's HSRP group fail function.

Example: if we are disable preempt on DS1. It can not become active device when G1/0/1 on DS2 fail. In this question, G0/1/0 on DS1 & DS2 is shutdown. Vlan104 (left): 150 - 1 = 149.

Vlan104 (right): 200 - 155

145. Result is priority 149 > 145 (Vlan104 on DS1 is active). If increase the decrement in the track value to a value greater than 6 (> or = 6). Vlan104 (left): 150 - 6 = 144. Result is priority 144 < 145 (vlan104 on DS2 is active).

NEW QUESTION: 4

Azure Resource

Answer:

Explanation:

Explanation

You can configure a lock on a resource group to prevent the accidental deletion.

As an administrator, you may need to lock a subscription, resource group, or resource to prevent other users in your organization from accidentally deleting or modifying critical resources. You can set the lock level to CanNotDelete or ReadOnly. In the portal, the locks are called Delete and Read-only respectively.

CanNotDelete means authorized users can still read and modify a resource, but they can't delete the resource.

ReadOnly means authorized users can read a resource, but they can't delete or update the resource.

Applying this lock is similar to restricting all authorized users to the permissions granted by the Reader role.
