êµ¬ì„±

Answer: C
Explanation:
Amazon CloudWatch alarm watches a single metric over a time period that the user specifies and performs one or more actions based on the value of the metric relative to a given threshold over a number of time periods. The user can setup an action which terminates the instances when their CPU utilization is below a certain threshold for a certain period of time. The EC2 action can either terminate or stop the instance as part of the EC2 action.

NEW QUESTION: 2
Update 10.0.3 was just released for software used on every computer. This package updates the existing software resource from 10.0.0 to 10.0.3. The package is configured as a software resource and will use rules to determine whether the 10.0.0 Version is installed. What is the last step of a Managed Delivery policy for computers that are missing version 10.0.0?
A. Applicability Rule
B. Software Execution
C. Detection Rule
D. Package Download
Answer: A

NEW QUESTION: 3
Which of the following is true of the generated native SQL below?

A. The parent select statement uses an inner join to directly match columns from physical tables in the database.
B. The derived table is executed independently, using Pass-Through SQL, and then processed locally.
C. The derived table is used to retrieve one data set, in order to fulfill the join condition of another data set.
D. The outer projection list will return more columns than listed, due to extra columns retrieved in the derived table.
Answer: A
