What sets us apart from others is, We have online and offline chat service stuff, and they possess the professional knowledge about the AZ-400 exam dumps, if you have any questions, just have a chat with them.

If you don't pass the exam unluckily, we have the full refund for you, [ESDP2201B New Real Test](#) If you use our Microsoft Azure DevOps Solutions exam dump, you will feel relaxed and motivated because we have selected the most important study points for you.

During the trial period, you can fully understand AZ-400 practice test ' learning mode, completely eliminate any questions you have about AZ-400 exam torrent, and make your purchase without any worries.

Free PDF Quiz Microsoft - Professional AZ-400 Exam Consultant Products like AZ-400 training materials: Microsoft Azure DevOps Solutions in markets today can be divided into several types, the first type is profit-oriented, the second type is [Practice C ARCON 2108 Exam Pdf](#) aimed at small profits and quick returns, and the third one is customer-oriented.

Free demo of Microsoft AZ-400 exam questions allowing you to try before you buy, You can choose our Microsoft Azure DevOps Solutions valid training material for specific study and well preparation.

You just need to send the scanning copy of your examination report card to us, You can enjoy the right of free update for one year if you choose us, and the latest version for AZ-400 exam dumps will be sent to you automatically.

With the Sfjbs's Microsoft AZ-400 exam training materials, you will have better development in the IT industry, The high quality and accurate AZ-400 valid questions & answers are the guarantee of your success.

Our Sfjbs's senior experts are continuing to enhance the quality of our training materials, At present, our AZ-400 study materials have applied for many patents.

So why choose other products that canâ€™t assure your success?

NEW QUESTION: 1

You provide an Azure API Management managed web service to clients. The back-end web service implements HTTP Strict Transport Security (HSTS).

Every request to the backend service must include a valid HTTP authorization header.

You need to configure the Azure API Management instance with an authentication policy.

Which two policies can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Basic Authentication
- B. Digest Authentication
- C. Certificate Authentication
- D. OAuth Client Credential Grant

Answer: C,D

Testlet 1

Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

You are a developer for Proseware, Inc. You are developing an application that applies a set of governance policies for Proseware's internal services, external services, and applications. The application will also provide a shared library for common functionality.

Policy service

You develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events.

The application must include the Event Grid Event ID field in all Application Insights telemetry.

Policy service must use Application Insights to automatically scale with the number of policy actions that it is performing.

Other

Anomaly detection service

You have an anomaly detection service that analyzes log information for anomalies. It is implemented as an Azure Machine Learning model. The model is deployed as a web service. If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook.

Health monitoring

All web applications and services have health monitoring at the /health service endpoint.

Issues

Policy loss

When you deploy Policy service, policies may not be applied if they were in the process of being applied during the deployment.

Performance issue

When under heavy load, the anomaly detection service undergoes slowdowns and rejects connections.

Notification latency

Users report that anomaly detection emails can sometimes arrive several minutes after an anomaly is detected.

Policies

Log policy

All Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days.

Authentication events

Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.

PolicyLib

You have a shared library named PolicyLib that contains functionality common to all ASP.NET Core web services and applications. The PolicyLib library must:

Exclude non-user actions from Application Insights telemetry.

Provide methods that allow a web service to scale itself.

Ensure that scaling actions do not disrupt application usage.

Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong.

Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong.

NEW QUESTION: 2

DRAG DROP

DRAG DROP

Your company has an Office 365 subscription and uses Microsoft Exchange Online. Some employees have archive mailboxes that have the default retention policy applied.

The default retention policy does not meet the latest company requirements. You create a retention policy named RetentionPolicy1 and apply the necessary retention tags to the policy.

You need to apply the new retention policy to all archive mailboxes and ensure that the new retention policy tags are applied as soon as possible.

Which three Windows PowerShell commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Box 1:

Box 2:

Box 3:

Retention Policy Tags are used to apply retention settings to folders and individual items such as e-mail messages. These settings specify how long a message remains in a mailbox and the action to be taken when the message reaches the specified retention age.

A Retention Policy is a group of retention tags that can be applied to a mailbox.

Box 1: The Get-Mailbox cmdlet retrieves a list of mailboxes.

The -Filter {(ArchiveStatus -eq 'Active')}} statement filters the list of retrieved mailboxes to list only the mailboxes that have Archiving enabled and active.

Box 2: The Set-Mailbox cmdlet is used to assign the retention policy to the mailboxes retrieved in step 1.

Box 3: The Start-ManagedFolderAssistant cmdlet is used to immediately start messaging records management (MRM) processing of mailboxes. This will immediately apply the new retention policy.
