NEW QUESTION: 2

You work as a database administrator at ABC.com. The ABC.com network consists of a single domain named ABC.com. ABC.com makes use of Microsoft SQL Server 2012 in their environment. You have recently created an SQL Server Integration Services (SSIS) project catalog that contains two Environments. A single Environment Variable, named ConnectionString, of type string is specified by each environment. The project also has a project Connection Manager configured to link up with the data warehouse.

You have been instructed to make sure that deployed packages are executed using any of the specified Environments.

Which of the following suitably describes an Environment Variable?

- A.** An environment variable defines a literal value that can be assigned to a parameter during package execution.
- B.** An environment variable can be used to manage Integration Services objects in the catalog.
- C.** An environment variable is a container of variables that can be referenced by Integration Services projects.
- D.** An environment variable specifies the data that will be used by a package.
- E.** An environment variable allows you to use folders to organize your projects and environments.
