NEW QUESTION: 2
You administer a SQL Server Reporting Services (SSRS) infrastructure. Data alerts are provisioned.
You need to monitor the number of report data feed processing events during every automated execution.
Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:
Explanation:

Explanation
Box 1:

Box 2:

Box 3:

Note:
* DeliverAlert
The runtime creates the data alert message and sends it to all recipients by email.
* GenerateAlert
The alerting runtime processes the report data feed, applies the rules specified in the data alert definition, determines whether to create an instance of the data alert, and if needed creates an instance of the data alert.
* Data Alert Manager lists alert definitions and error information that help information workers and alerting administrators understand why the failure occurred. Some common reasons for failure include:
The report data feed changed and columns that are used in the data alert definition rules are no longer included in the data feed.
Permission to view the report was revoked.

The data type in the underlying data source changed and the alert definition is no longer valid.
