NEW QUESTION: 1

Sie haben ein Azure-Abonnement, das die in der folgenden Tabelle aufgeführten Ressourcen enthält.

Sie müssen eine Netzwerkschnittstelle mit dem Namen NIC1 erstellen.

An welchem Ort können Sie NIC1 erstellen?

- A. Nur Ost-USA.
- B. Ost-USA, Westeuropa und Nordeuropa.
- C. Nur Ost- und Westeuropa.

D. Nur Ost-USA und Nordeuropa.

Answer: A

Explanation:

Explanation

A virtual network is required when you create a NIC. Select the virtual network for the network interface. You can only assign a network interface to a virtual network that exists in the same subscription and location as the network interface. Once a network interface is created, you cannot change the virtual network it is assigned to.

The virtual machine you add the network interface to must also exist in the same location and subscription as the network interface.

NEW QUESTION: 2

You manage a Microsoft SQL Server instance named SQL1 that has 32 gigabytes (GB) of total memory. The instance supports an app named App1 that only uses a single thread.

App1 frequently queries the database using the same index. The operating system and App1 combined require 8 GB of memory to function.

You need to ensure that the SQL Server does not limit the performance of App1.

What configuration option should you set?

A. index create memory to 16 GB

B. max worker threads to 1

C. max server memory to 16 GB

D. min memory per query to 4 GB

Answer: A

Explanation:

The index creates memory option controls the maximum amount of memory initially allocated for sort operations when creating indexes. The default value for this option is 0 (self-configuring). If more memory is later needed for index creation and the memory is available, the server will use it; thereby, exceeding the setting of this option. If additional memory is not available, the index creation will continue using the memory already allocated.
