- A. Synchronous updates of the data and standby active systems in a hot site
- B. Synchronous remote copy of the data in a warm site that can be operational in 48 hours
- C. A hot site that can be operational in eight hours with asynchronous backup of the transaction logs
- D. Distributed database systems in multiple locations updated asynchronously

Answer: B

Explanation:

The synchronous copy of the storage achieves the RPO objective and a warm site operational in 48 hours meets the required RTO.
