We assume all the responsibilities our C_SACP_2120 practice materials may bring, You can find many SAP and online SAP Certified Application Associate training resources are offered in your city, regardless of where you live.

NEW QUESTION: 1

Which statement is true about an inner join specified in the WHERE clause of a query?

- A. It must have primary-key and foreign key constraints defined on the columns used in the join condition.
- B. It is applicable for only equijoin conditions.
- C. It requires the column names to be the same in all tables used for the join conditions.
- D. It is applicable for equijoin and nonequijoin conditions.

Answer: D

NEW QUESTION: 2

David works as a Server Administrator for www.company.com Inc. The company uses the Windows 7 operating system. David wants to increase the security of a message or file to ensure that it is fully protected. Which of the following will David use to accomplish the task?

- A. FAT
- B. FAT64
- C. NTFS
- D. Encryption

Answer: D

Explanation:

Encryption is a method to increase the security of a message or file by scrambling the contents so that the file or message can be read only by someone who has the right encryption key to unscramble it. A user can use encryption when he wants a strong level of protection for his information. answer B is incorrect. NTFS is a file system that is used in Windows 7. It is capable of recovering from some disk-related errors automatically. It has improved support for larger hard disks. In NTFS, a user can use permissions and encryption to restrict access to specific files to approved users. answer A is incorrect. FAT is a file system supported by Windows NT. The FAT file system is characterized by the file allocation table (FAT). This is a table that resides at the very "top" of the volume. To protect the volume, two copies of FAT are kept in case one becomes damaged. In addition, the FAT tables and the root directory must be stored in a fixed location so that the system's boot files can be correctly located. answer D is incorrect. Extended File Allocation Table (exFAT), also known as FAT64, is a proprietary file system of Microsoft. The exFAT file system is suited especially for flash drives to be used in embedded devices for Microsoft's newer operating systems, such as Windows Vista Service Pack 1, Windows 7, Windows Server 2008, etc. The exFAT file system not only handles large files but also enables seamless interoperability between desktop PCs and devices, such as portable media devices, so that files can easily be copied between desktop and device. It is better adapted to the growing needs of mobile personal storage. According to Microsoft, the exFAT file system has the following advantages:

Enables the file system to handle growing capacities in media, increasing capacity to 32 GB and larger.

Handles more than 1000 files in a single directory.

Speeds up storage allocation processes.

Removes the previous file size limit of 4 GB.

Supports interoperability with future desktop OSs.

Provides an extensible format, including OEM-definable parameters to customize the file system for specific device characteristics.

The exFAT file system can be used where the NTFS file system is not a feasible solution (due to data structure overhead), or where the file size or directory

restrictions of previous versions of the FAT file system are unacceptable.

NEW QUESTION: 3

- A. Option D
- B. Option C
- C. Option A
- D. Option B

Answer: C

Explanation:

* Scenario: A Datum spent a significant amount of time developing a custom application that will be used by hundreds of the company's partners and suppliers. The application will always run on the latest version of SQL Server and SharePoint Server. A Datum wants the application to be available to the users immediately.

*an External Connector (EC) license is offered for some products as an optional alternative to address specific customer scenarios.

*If you want external users-such as business partners, external contractors, or customers-to be able to access your network, you have two licensing options:

Acquire CALs for each of your external users.

Acquire External Connector (EC) licenses for each server that will be accessed by your external users.
