NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com.

The domain contains an organizational unit (OU) named OU1 as shown in the OU1 exhibit. (Click the Exhibit button.)

The membership of Group1 is shown in the Group1 exhibit. (Click the Exhibit button.)

You configure GP01 to prohibit access to Control Panel. GP01 is linked to OU1 as shown in the GP01 exhibit. (Click the Exhibit button.)

Select Yes if the statement can be shown to be true based on the available information; otherwise select No.

Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Group Policy does NOT APPLY TO SECURITY GROUPS, only users and computers in an OU.

Consequently, the only users in the OU are User2 and User4.

Since the Security Filtering specifies that the policy will only apply to users/computers in the OU who are members of Group1 or User3, User4 will not have the policy applied. Since User2 is, in fact, a member of Group1, the policy will be applied to user 2.

Thus, the only user who will not be able to access the control panel is User2.

NEW QUESTION: 3

Which action can a user take when using Scopia Mobile?

- A. Participate in the conference as audio only
- B. Perform all moderating functions of the conference
- C. Perform most of the moderating functions of the conference
- D. Share data with other participants

Answer: B

NEW QUESTION: 4

A network administrator is seeing a posture status "unknown" for a single corporate mac address but unknown machines are reported as `complaint`.

Which option is the reason for machine being reported `unknown`.

- A. Posture service disabled on cisco ISE
- B. Posture compliance condition is missing on the machine

C. Posture agent not installed on the machine

D. Posture policy does not support the OS

Answer: C

Explanation:

When a client first attempts to join the network, it might not have a NAC agent available to perform a posture assessment. Without a NAC agent, ISE will have no mechanism to determine what software is running on the endpoint. Accordingly, the endpoint will not know how to communicate its posture assessment to ISE. For this reason, an endpoint without a posture agent will be assigned an Unknown posture status.
