- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

The cool down period is the time difference between the end of one scaling activity (can be start or terminate) and the start

of another one (can be start or terminate). During the cool down period, Auto Scaling does not allow the desired capacity of the Auto Scaling group to be changed by any other CloudWatch alarm. Thus, in this case the trigger from the second alarm will have no effect.
