NEW QUESTION: 1

You have an Office 365 tenant that has an Enterprise E3 subscription. You configure multi-factor authentication for all users in the tenant. Remote users configure Outlook 2016 to use their Office 365 credentials.

You need to ensure that users only authenticate with Office 365 by using two-step verification.

What should you do?

- A. Modify the license type of the user accounts to an Enterprise E1 subscription.
- B. Remove the rights management license from the user accounts.
- C. Disable app passwords for the user accounts.
- D. Add the user accounts to a new security group.

Answer: C

Explanation:

All the Office 2016 client applications support multi-factor authentication through the use of the Active Directory Authentication Library (ADAL). This means that app passwords are not required for Office 2016 clients.

NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains a member server named HVServer1. HVServer1 runs Windows Server 2012 R2 and has the Hyper-V server role installed.

HVServer1 hosts 10 generation 1 virtual machines. All of the virtual machines connect to a virtual switch named Switch1. Switch1 is configured as a private network. All of the virtual machines have the DHCP guard and the router guard settings enabled.

You install the DHCP server role on a virtual machine named Server1. You authorize Server1 as a DHCP server in contoso.com. You create an IP scope.

You discover that the virtual machines connected to Switch1 do not receive IP settings from Server1.

You need to ensure that the virtual machines can use Server1 as a DHCP server.

What should you do?

- A. Disable the DHCP guard on all of the virtual machines that are DHCP clients.
- B. Enable single-root I/O virtualization (SR-IOV) on Server1.
- C. Enable MAC address spoofing on Server1.
- D. Disable the DHCP guard on Server1.

Answer: D

Explanation:

Explanation/Reference:

Explanation:

DHCP guard setting

This setting stops the virtual machine from making DHCP offers over this network interface.

To be clear - this does not affect the ability to receive a DHCP offer (i.e. if you need to use DHCP to acquire an IP address that will work) it only blocks the ability for the virtual machine to act as a DHCP server.
