NEW QUESTION: 1

If you were build a large-scale cloud-based architecture that required 100% efficient cell-based fabric, Virtual Output Queuing (VOQ), and 3.84 Tbps capacity per slot, which Arista switch series

- A. 0
- B. 7010T
- C. 1
- D. 7500E

Answer: D

NEW QUESTION: 2

A safety measure to implement when transferring a client with hemiparesis from a bed to a wheelchair is:

- A. standing the client and walking him or her to the wheelchair.

- B. having the client stand and push his body to the wheelchair.
- C. moving the wheelchair close to client's bed and standing and pivoting the client on his affected extremity to the wheelchair.
- D. moving the wheelchair close to client's bed and standing and pivoting the client on his unaffected extremity to the wheelchair.

Answer: D

Explanation:

Moving the wheelchair close to client's bed and having him stand and pivot on his unaffected extremity to the wheelchair is safer because it provides support with the unaffected limb. Basic Care and Comfort

NEW QUESTION: 3

Amazon

DynamoDB is used to store data for an application. The application is running on Amazon EC2 instances. The application needs to store data in a highly available and durable manner. The application also needs to be able to scale horizontally. Which of the following is the best solution to meet these requirements?

A. AWS

Batch processing of data is required. The data is stored in Amazon S3. The data is processed by Amazon EMR. The data is then loaded into Amazon Redshift. The data is then used for reporting and analytics.

B. AWS Data

Pipeline is used to process data. The data is stored in Amazon S3. The data is processed by Amazon EMR. The data is then loaded into Amazon Redshift. The data is then used for reporting and analytics.

C.

DynamoDB is used to store data for an application. The application is running on Amazon EC2 instances. The application needs to store data in a highly available and durable manner. The application also needs to be able to scale horizontally. Which of the following is the best solution to meet these requirements?

D. Amazon CloudWatch

Events are used to trigger actions. The data is stored in Amazon S3. The data is processed by Amazon EMR. The data is then loaded into Amazon Redshift. The data is then used for reporting and analytics.

Lambda is used to process data. The data is stored in Amazon S3. The data is processed by Amazon EMR. The data is then loaded into Amazon Redshift. The data is then used for reporting and analytics.

Answer: D

Explanation:
