Explanation:

From the output, we see that all ports are in Designated role (forwarding state) -> A and E are correct.

The command "show spanning-tree vlan 30 only shows us information about VLAN 30. We don't know how many VLAN exists in this switch -> B is not correct. The bridge priority of this switch is 24606 which is lower than the default value

bridge priority 32768 -> C is correct. All three interfaces on this switch have the connection type "p2p", which means Point-to-point environment - not a shared media >> D is not correct. The only thing we can specify is this switch is the root bridge for VLAN 30 but, we can not guarantee it is also the root bridge for other VLANs -> F is not correct.
