Explanation:

NEW QUESTION: 2

Native notifications sent from back-end systems to the server, which forwards them on to the clients.

(Please choose the correct term).

- A. Lifecycle Management
- B. Security Profile
- C. Push Notifications
- D. Offline OData Service
- E. Management Cockpit
- F. Supportability

Answer: C

NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. The domain contains multiple servers that run multiple applications. Domain user accounts are used to authenticate access requests to the servers.

You plan to prevent NTLM from being used to authenticate to the servers.

You start to audit NTLM authentication events for the domain. You need to view all of the NTLM authentication events and to identify which applications authenticate by using NTLM.

On which computers should you review the event logs and which logs should you review? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

Explanation

Do not confuse this with event ID 4776 recorded on domain controller's security event log!!!This question asks for implementing NTLM auditing when domain clients is connecting to memberservers! See below for further information.

<https://docs.microsoft.com/en-us/windows/device-security/security-policy-settings/network-security-restrict-ntlm> Via lab testing, most of the NTLM audit logs are created on Windows 10 clients, except that you use Windows Server 2016 OS as clients

(but this is unusual)

NEW QUESTION: 4

This question will ask you to provide a line of missing code. Given the following data set WORK.SALES:

The following program is submitted:
