NEW QUESTION: 1
Which of the following algorithms would be used to provide non-repudiation of a file transmission?
A. SHA
B. MD5
C. AES
D. RSA
Answer: B
Explanation:
Non-repudiation is the ability to prove that the file uploaded and the file downloaded are identical.
Non-repudiation is an essential part of any secure file transfer solution End-to-end file non-repudiation is the ability to prove who uploaded a specific file, who downloaded it, and that the file uploaded and the file downloaded are

identical. It is a security best practice and required by Federal Information Security Management Act (FISMA), Gramm-Leach-Bliley Act (GLBA), Health Insurance Portability and Accounta-bility Act (HIPAA), Sarbanes-Oxley Act (SOX), and others.

The ability to provide end-to-end file non-repudiation is an essential part of any secure file transfer solution because it provides the following benefits.

* Guarantees the integrity of the data being transferred
* Plays a valuable forensic role if a dispute arises about the file
* Provides a capability that is required for Guaranteed Delivery

Providing end-to-end file non-repudiation requires using a secure file transfer server that can perform all of the following activities:

* Authenticate each user who uploads or downloads a file
* Check the integrity of each file when uploaded and downloaded
* Compare the server and client-generated integrity check results
* Associate and log the authentication and check results

The cryptographically valid SHA1 and MD5 algorithms are widely used to do file integri-ty checking. SHA1 is the stronger of these, and is approved for file integrity checking under US Federal Information Processing Standard FIPS 140-2. MOVEit secure file transfer server and MOVEit Automation MFT automation server each have built-in FIPS 140-2 validated cryptographic modules that include the SHA1 and MD5 algorithms, which they use for file integrity checking.

NEW QUESTION: 2
A user needs to change the subject property of a document named "Blueprint" to "Office Building".
Which DQL statement will achieve this result?
