If you want to find a good job **New Guide MB-920 Files** you must own good competences and skillful major knowledge.

NEW QUESTION: 1

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in the series.

Start of repeated scenario

Contoso. Ltd. has a Microsoft SQL Server environment that includes SQL Server Integration Services (SSIS), a data warehouse, and SQL Server Analysis Services (SSAS) Tabular and multi-dimensional models.

The data warehouse stores data related to your company sales, financial transactions and financial budgets. All data for the data warehouse originates from the company's business financial system.

The data warehouse includes the following tables:

The company plans to use Microsoft Azure to store older records from the data warehouse.

You must modify the database to enable the Stretch Database capability.

Users report that they are becoming confused about which city table to use for various queries. You plan to create a new schema named Dimension and change the name of the `dbo.dimension_city` table to `Dimension.city`. Data loss is not permissible, and you must not leave traces of the old table in the data warehouse.

The `fact.Transaction` table has measures named `RawCost` and `Totalsale` that calculate the wholesale cost of materials. You plan to create a measure that calculates the profit margin based on the two existing measures.

You must implement a partitioning scheme for the `fact.Transaction` table to move older data to less expensive storage. Each partition will store data for a single calendar year, as shown in the exhibit (Click the Exhibit button.) You must align the partitions.

You must improve performance for queries against the `fact.Transaction` table. You must implement appropriate indexes and enable the Stretch Database capability.

End of repeated scenario

You need to create the `ProfitMargin` measure for the `fact.Transaction` table.

How should you complete the MDX statement? To answer, select the appropriate MDX segments in the answer area.

Answer:

Explanation:

NEW QUESTION: 2

- A. Option B
- B. Option D
- C. Option C
- D. Option A

Answer: C
