#### NEW QUESTION: 1

Resiliency is the ability to recover from a disaster or other disruptive event. Which of the following is NOT a characteristic of resiliency?

- A. Redundancy
- B. Fault tolerance
- C. Availability
- D. Scalability

**Answer: A**

Explanation:

Resiliency is the correct answer but other options look very similar and is provided to create confusion.

One need to be careful while answering the question.

Resiliency is often confused with redundancy, Key difference is

A redundant system includes multiple channels to provide alternate paths for communications in case of individual failures.

... Resilience, on the other hand, refers to a system's ability to adapt to failures and to resume normal operations when the failure has been resolved.

**NEW QUESTION: 2**

Identify the missing words in the following sentence.  
A benefit of adopting PRINCE2 is that it can be applied to [ ? ] - and can easily be implemented alongside specialist techniques.

- A. business as usual

ê¼ê±°í•æë<¤.

**Answer: D**

Explanation:

A DTA or DTL is measured at the rates expected to apply when it is realized or settled, based on tax laws and rates enacted or substantively enacted as of the balance sheet date.

If different rates apply to different taxable profit levels, a DTA or DTL is measured based on the average rates expected to apply in the periods when the temporary differences are expected to reverse. The tax rate or tax base may vary with the manner of recovery or settlement. For example, one tax rate may apply if an asset is sold immediately and another may apply if it is to be recovered through continued use.
