NEW QUESTION: 1

Azure Active Directory (AD) is a cloud-based directory service that provides a central location for managing users and groups. It is used to authenticate and authorize users accessing applications and services. AD is a key component of Microsoft 365 and Azure cloud services. It provides a secure and scalable way to manage user identities and access to resources. AD is used to manage user accounts, groups, and permissions. It is used to authenticate users and authorize access to resources. AD is a key component of Microsoft 365 and Azure cloud services. It provides a secure and scalable way to manage user identities and access to resources. AD is used to manage user accounts, groups, and permissions. It is used to authenticate users and authorize access to resources.

Which of the following is used to specify a fallback application type?

- A. `oAuth2AllowImplicitFlow`
- B. `requiredResourceAccess`
- C. `oAuth2Permissions`
- D. `allowPublicClient`

Answer: C

Explanation:

The "oAuth2Permissions" is used for web API permissions. The Microsoft documentation mentions the following:

Option A is incorrect since this is used to specify a fallback application type.
Option C is incorrect since this is used to provide a list of permission scopes and app roles that an application requires from a specified resource.
Option D is incorrect since this is used for single page applications.
