It is common to use Resilient Ethernet Protocol (REP) on the manufacturing floor as a resiliency protocol, as opposed to the Enterprise where it is not generally deployed. What are two reasons why REP is more suitable for the plant floor? (Choose two)

- A. REP converges faster than Spanning Tree, allowing for greater network availability.
- B. Running dual cables from access switches to an aggregation switch can have a much higher cost on the plant floor than in the Enterprise and running a ring protocol like REP provides resiliency at a lower cost.
- C. REP supports Industrial Ethernet protocols better because it moves the packets faster.
- D. Industrial protocols can be negatively impacted by the number of nodes the Ethernet frame traverses, REP provides a topology with no more than 3 nodes for any data path.
- E. REP is only supported on Industrial Ethernet switches, it is not supported on Catalyst switches.

**Answer: A,B**

**NEW QUESTION: 4**

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. A user named User1 is a member of the local Administrators group. Server1 has the AppLocker rules configured as shown in follow:

Rule1 and Rule2 are configured as shown in the following table:

You verify that User1 is unable to run App2.exe on Server1. Which changes will allow User1 to run D:\\Folder1\\Program.exe and D:\\Folder2\\App2.exe? Choose Two.

- A. User1 can run D:\\Folder2\\App2.exe if App2.exe is renamed
- B. User1 can run D:\\Folder2\\App2.exe if App2.exe is moved to another folder
- C. User1 can run D:\\Folder1\\Program.exe if Program.exe is updated
- D. User1 can run D:\\Folder1\\Program.exe if Program.exe is

renamed

**E.** User1 can run D:\\Folder2\\App2.exe if App2.exe is upgraded

**F.** User1 can run D:\\Folder1\\Program.exe if Program.exe is moved to another folder

**Answer: E,F**

Explanation:

[https://technet.microsoft.com/en-us/library/ee449492\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/ee449492(v=ws.11).aspx)

For "D:\\Folder1\\Program.exe", it is originally explicitly denied due to Rule1, when moving the "Program.exe" out of "D:\\Folder1\\", it does not match Rule1. Assume that "Program.exe" is moved to "D:\\Folder2", it matches an Explicit Allow rule for group "BUILTIN \\Administrators" which User1 is a member of, therefore A is correct. For "App2",exe, it matches a Explicit Deny rule using its File Hash (created File content), no matter where you move it to, or how you rename it, it would still match Rule2. Only changing the file content of App2.exe would let it no longer match the explicit deny hash-based rule "Rule2". By upgrading its version and content, it will generate a new hash. so F is correct.
