<https://www.sap.com/developer/tutorials.html> such as SAPUI5 - Create an empty UI5 L' Web IDE project

D. The video material from SAP HANA Academy on YouTube

E. The ABAP help portal

Answer: A,C,D

NEW QUESTION: 3

An attacker used an undocumented and unknown application exploit to gain access to a file server. Which of the following BEST describes this type of attack?

A. Zero-day

B. Cross-site scripting

C. Session hijacking

D. Integer overflow

E. XML injection

Answer: A

Explanation:

The vulnerability is undocumented and unknown. This is zero day vulnerability. A zero day vulnerability refers to a hole in software that is unknown to the vendor. This security hole is then exploited by hackers before the vendor becomes aware and hurries to fix it-this exploit is called a zero day attack. Uses of zero day attacks can include infiltrating malware, spyware or allowing unwanted access to user information. The term "zero day" refers to the unknown nature of the hole to those outside of the hackers, specifically, the developers. Once the vulnerability becomes known, a race begins for the developer, who must protect users.
